Abstract:

The shortcoming of the conventional appointment system which frequently lead to the lengthy waiting time and worst patient experience that are brought to the light by the growing need for easily accessible and effective healthcare services that are still missing. We have created an AI-assisted medical appointment platform that automate symptom-based specialist recommendations, expedites scheduling and protect patient data in the order to solve this issue. The solution combines a Firebase backend with the ReactJS/NextJS interface and AI module driven by the Gemini API that evaluate user symptoms and recommend them appropriate professional without making the diagnoses. Key findings that include a 97.8% successful booking rate, 91.5% accuracy in specialist prediction and excellent patient and physician satisfaction. In conclusion the platform promotes accessibility, decreases administrative load and which provides an ethical scalable model for modern digital healthcare.
